REASONS FOR ALLOWANCE

The claimed invention of a control circuit for a switching device as recited by claims 8-21 is found to be allowable over the prior art since a control circuit comprising a input voltage trailing edge detector providing a reset signal, a ramp generator providing a ramp signal responsive to the reset signal, an output voltage comparator providing an error signal, a second comparator providing a PWM signal responsive to the error and ramp signals, and a driver providing drive signals to the switching device responsive to the PMW signal was not found to be singularly or collectively taught by the prior art.

The claimed invention of a PWM regulator as recited by claims 22-28 is found to be allowable over the prior art since a PWM regulator comprising a square wave input voltage source, a switching device, and the above control circuit was not found to be singularly or collectively taught by the prior art.

The claimed invention of a PWM method as recited by claims 29 and 30 is found to be allowable over the prior art since a PWM method comprising detecting a input voltage trailing edge to provide a reset signal, a generating a ramp signal responsive to the reset signal, comparing an output voltage to provide an error signal, comparing the error and ramp signals to providing a PWM signal, and driving a switching device responsive to the PMW signal was not found to be singularly or collectively taught by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
